Dear EUtech Scientific Engineering GmbH,

I am Mohannad AlArouri, a student of the International Automotive Engineering master at RWTH Aachen University in my first semester. I would like to apply for the position of **Softwareentwicklung Studentische Hilfskraft/Praktikant(m/w)**. I think I hold both the skills and the interest to deliver the most outcome needed for the job.

I graduated as a mechatronics engineer with distinction and worked for almost a year and five months as a software engineer. I hold sharp skills in several programming languages including: C#, Javascript and Python. Moreover, I am a certified SAP Business One consultant with excellence certificate from SAP. Using Javascript, I worked on a back-end API powered by NodeJS/ExpressJS that servers a pre-sale application. I did also develop a pre-sale mobile application using React Native with Javascript ES6. Furthermore, I have an excellent experience in .NET Framework and worked on several big and small projects. These include but are not limited to: an ASP.NET Core Web API 2 project that supports a van-sale application as well as integration services that link SAP Business One to NCR Point of Sale and the previously mentioned pre-sale API. Interestingly enough, I have deep understanding of programming paradigms, modelling process and object-oriented design. In addition, I can learn fast and steady and always willing to learn from others in a systematic, accumulative way.

I have always dreamt of working in an internationally admired environment as that of Germany. I look forward to this job to be my stepping stone into the German IT market, where I will elevate my skills and be conditioned to be an active part of this constantly demanding, constantly developing environment. On the technical level, I would like to further enhance my programming skills and diversify my knowledge of software engineering. More importantly, I would like to experience the professionalism by which IT projects are planned for and run in Germany. This will make me more productive and better oriented in comprehending modern-day IT challenges.

Although my German skills are still basic, I would like to assert that I will be able to make them reliable enough within the coming four months.

Finally, I think my skills are suitable for the job and I have a clear interest in developing myself while benefiting the company the most. I would like to thank you for considering my application and looking to hear from you.

Mohannad AlArouri
