

## Exercise V-2

### Given:

Linear elastic isotropic material  $E = 2 \cdot 10^5 \text{ N/mm}^2$

One principal stress is given:  $8 \text{ N/mm}^2$

### Questions:

- Find the other principal (eigen) stresses
- Find the eigen-directions and make a sketch

Figure 1: Stress matrix

### Exercise V.3

**Given:** a stress-state: 
$$\begin{bmatrix} 60 & 0 & 0 \\ 0 & 20 & 20 \\ 0 & 20\sqrt{3} & -20 \end{bmatrix} \quad E = 2 \cdot 10^5 \quad \nu = 0.25$$

- Compute the principal stresses
- Compute the eigen-directions
- Compute the maximal shear-stress

## Exercise V.10

**Problem:**

Given:

- In a point P of a body we have a plane-stress state with:  $\sigma_{13} = \sigma_{23} = \sigma_{33} = 0$
- Given are these (mixed) stress components:  
 $\sigma_{11} = 92 \text{ MPa}$   
 $\sigma'_{11} = 194 \text{ MPa}$   
 $\sigma'_{12} = -42 \text{ MPa}$
- The material is linear elastic with:  
 $E = 2 \cdot 10^5 \text{ MPa}$   
 $\nu = 0.25$

Questions:

- Give the stress tensor in the original  $x_1x_2x_3$  system.
- Give the stress tensor in the new  $x'_1x'_2x'_3$  coordinate system, as obtained by a rotation of the coordinates about  $45^\circ$  around the  $x_3$ -axis, as sketched above.
- Compute the eigen-stresses and the eigen-directions.
- Give the strain tensor in the  $x'_1x'_2x'_3$  coordinate system.
