

# Heat Conduction: Task 21

The image describes a cylindrical body of infinite expansion with homogenous heat loss in the outer part. The inner compartment doesn't conduct heat.

1

To meet the condition on the right side, the temperature gradient is zero. Due to the constantly decreasing heatflux, the temperature gradient decreases constantly from left to right.

2

To meet the condition on the right side, the temperature gradient is zero at the interface.

3

There is no heat transport through the white area so the temperature gradient remain zero.

4

Due to symmetry reasons, the temperature gradient in the center is zero.
