

## Surface Brightness: Task 4

The image shows a grey body, which is partially transmitting the ambient black radiation.

1   $\dot{Q}_1 = \sigma \cdot \epsilon_1 \cdot A_1 \cdot T_1^4 + \sigma \cdot \tau_1 \cdot A_1 \cdot T_A^4$

- 2  Since the body is not reflecting, its surface brightness contains its grey emission and transmission of the ambient radiation.
